

Part 1: Add an Email Field **EASY**

Objective: Practice adding a new **Entry** control with the correct keyboard type.

Instructions

- 1. Open the **StudentInfoForm** project.
- 2. In **MainPage.xaml**, add a new **Label** and **Entry** for **Email** below the Grade Level field.
- 3. Set the **Keyboard** to **Email** so the email keyboard appears on mobile.
- 4. Update the Submit handler to include the email in the result summary.

Requirements

- 1. Perform the given tasks under each part. Show the outcome after every part.
- 2. Write your reflections.
- 3. Submit a laboratory report that contains all requirements in a single PDF file.

Filename format: Please refer to the instructions that will be given during our class.

Expected Output

An email input field appears on the form. The result shows: *Student: [name], Age: [age], Grade: [grade], Email: [email]*.

Solution — XAML

```
<Label Text="Email Address:" FontAttributes="Bold" />

<Entry x:Name="entryEmail"
      Placeholder="Enter your email address"
      Keyboard="Email" />
```

Solution — C# (update **lblResult.Text)**

```
lblResult.Text = $"Student: {entryName.Text}, Age: {entryAge.Text}, " +
                $"Grade: {entryGrade.Text}, Email: {entryEmail.Text}";
```

Part 2: Add a School Logo Image **MODERATE**

Objective: Practice adding an **Image** control to a MAUI application.

Instructions

- 1. In Solution Explorer, expand **Resources > Images**.
- 2. Right-click the **Images** folder and select **Add > Existing Item**.
- 3. Choose any PNG image from your computer (or use **dotnet_bot.png** already in the project).
- 4. In **MainPage.xaml**, add an **Image** control **ABOVE** the title Label to display the image.
- 5. Set **HeightRequest** to **80**, **Aspect** to **AspectFit**, and **HorizontalOptions** to **Center**.

Expected Output

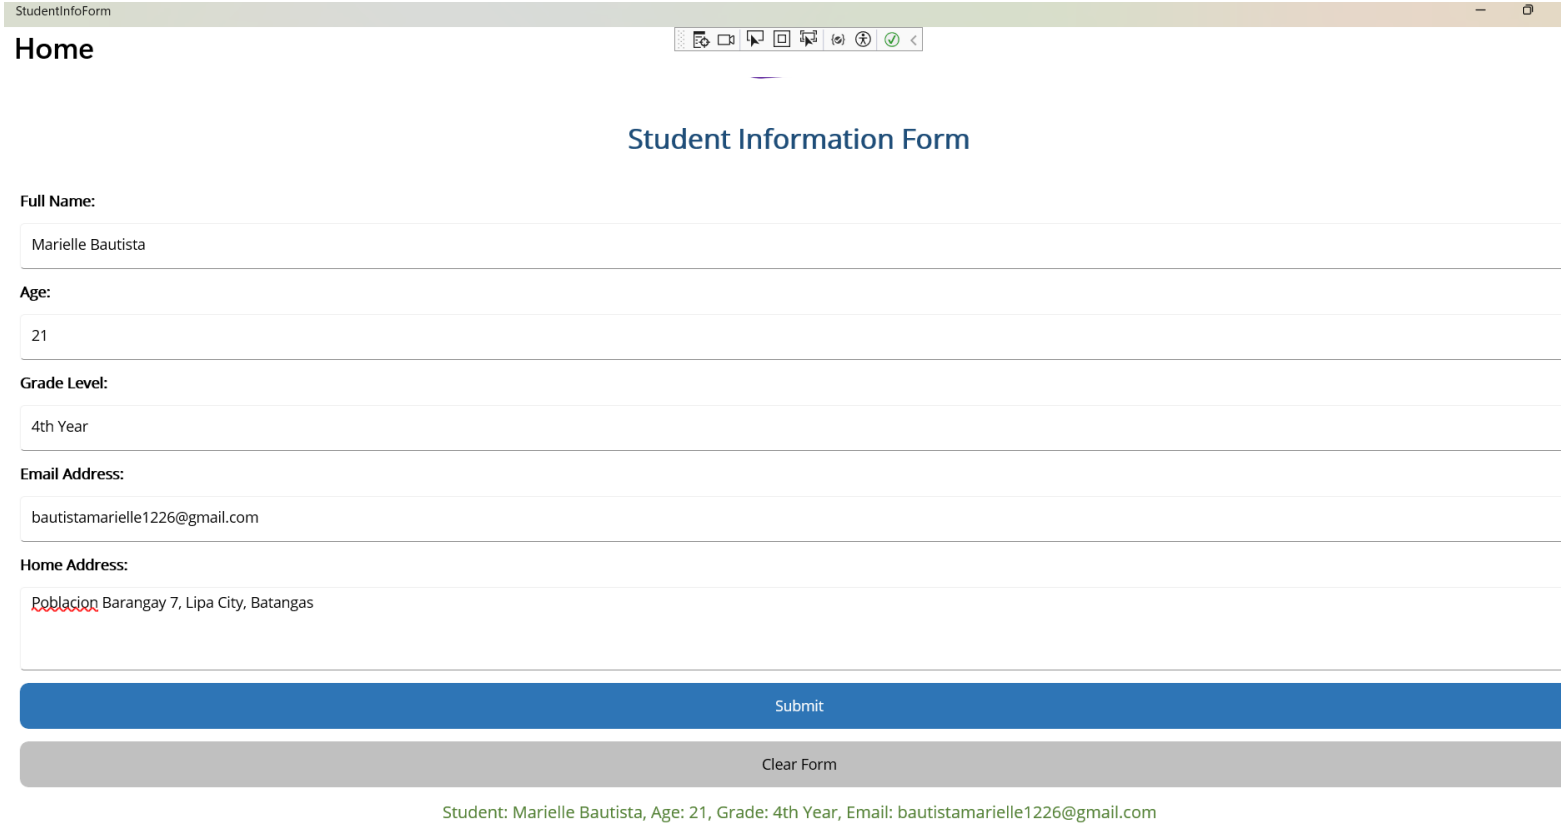

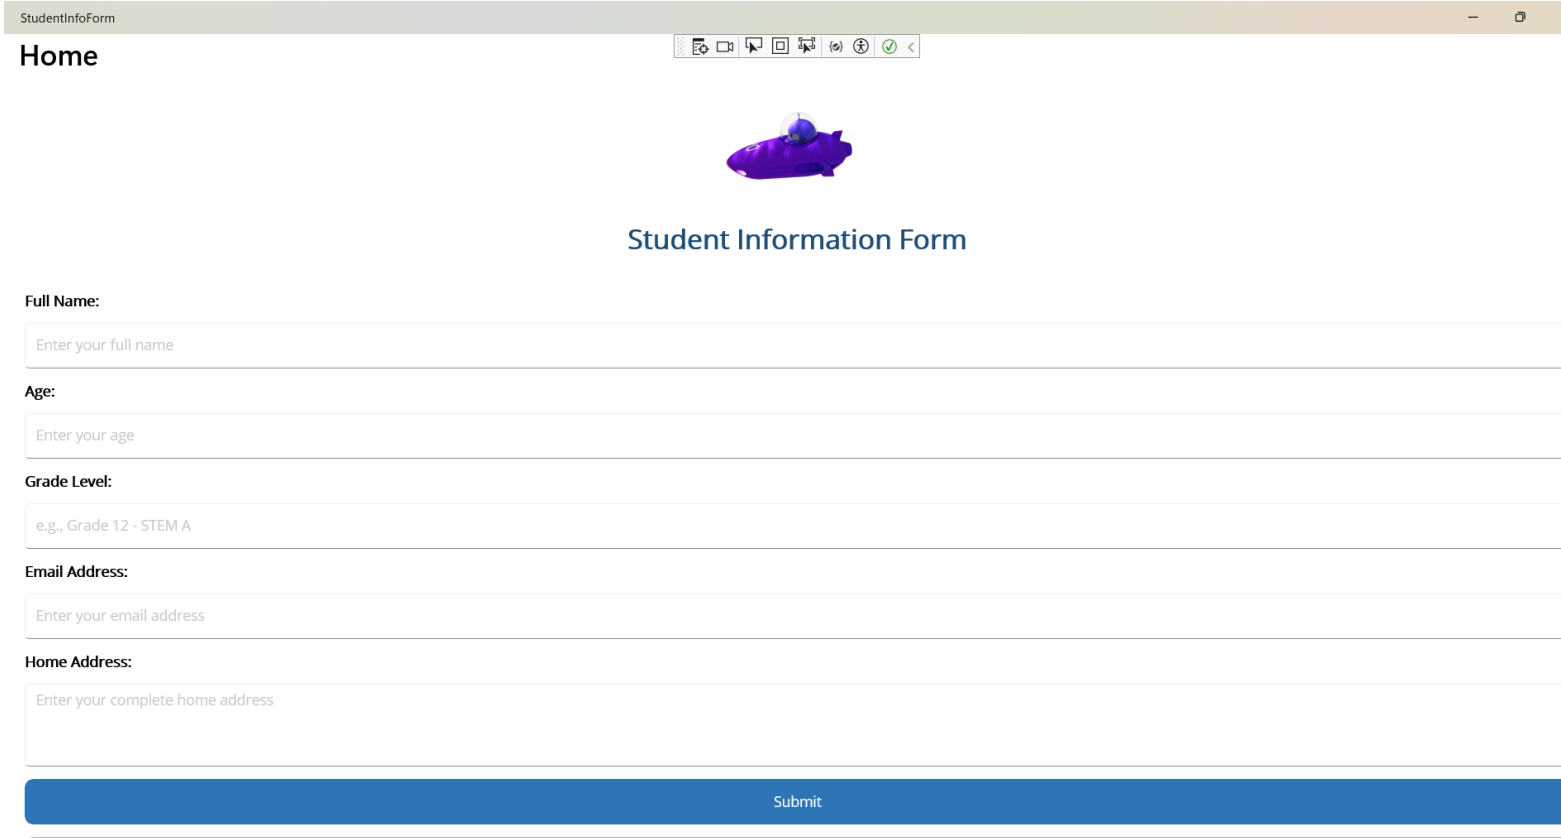

A logo/image appears above the form title.

Solution — XAML

```
<Image
```

```
Source="dotnet_bot.png"
HeightRequest="80"
Aspect="AspectFit"
HorizontalOptions="Center"
Margin="0,0,0,10" />
```

TIP: Images must be placed inside the **Resources/Images** folder for .NET MAUI to find them. The **Margin="0,0,0,10"** adds 10 units of space below the image so it doesn't sit flush against the next element.

Challenge Part: Personal Profile Card Form

Objective: Apply all concepts to build a personal profile form with multiple control types and basic validation.

Instructions

1. Create a **NEW** .NET MAUI project named **ProfileCard**.
2. Design a form with the following fields:
 - **Full Name** — **Entry**
 - **Nickname** — **Entry**
 - **Age** — **Entry** with **Keyboard="Numeric"**
 - **Email** — **Entry** with **Keyboard="Email"**
 - **Mobile Number** — **Entry** with **Keyboard="Telephone"**
 - **About Me** — **Editor** with **HeightRequest** at least 80
3. Add a profile placeholder **image** at the top using any image file.
4. Add a **Save Profile** button that shows a **DisplayAlert** with the user's name and nickname.
5. Add a **Clear** button that resets all fields.
6. **Validate** that Full Name and Age are not empty before showing the alert.

Expected Output

A complete profile form with an image, all input fields, validation, and working buttons.

TIP: Use **string.IsNullOrEmpty()** for validation. Set the appropriate **Keyboard** property on each **Entry** to restrict input type on mobile devices.

REFLECTION:

In this activity, I learned how to create a personal profile form using different .NET MAUI controls such as Entry, Editor, Image, and Button. I also learned how to set the correct keyboard type for age, email, and mobile number. I was able to add validation for the Full Name and Age fields and use DisplayAlertAsync to show the saved information. I also learned how to make a Clear button that resets all the input fields. This activity helped me understand how forms and button events work in .NET MAUI.

Grading Rubric — Personal Profile Card Form

Criterion	Excellent (4)	Satisfactory (3)	Developing (2)	Beginning (1)
Project Creation	Correct name, .NET 8, runs without errors	Minor issues, runs	Created with help	Cannot create project
Image Control	Image visible, centered, correct AspectFit	Image present, minor positioning issue	Image added but not displayed	No image
All 6 Input Fields	All fields present with correct control types and keyboards	5 fields correct	3–4 fields correct	Fewer than 3 fields
Buttons and Events	Save and Clear both work correctly	Save works, Clear has issues	One button works	No button functionality
Validation	Empty name/age shows DisplayAlert properly	Validation works but message is unclear	Partial validation	No validation

About Me:

I am a friendly person and I enjoy spending time with my friends. I can be shy when meeting new people, but I become more comfortable and jolly once I get to know them. In my free time, I like playing games, going out with friends, and reading fiction books. I enjoy discovering new stories because they help me relax and use my imagination. I also like trying new things and creating good memories with the people close to me. I value friendship, respect, and being someone others can easily get along with. My goal is to continue improving my skills, become more confident in myself, and learn from every experience that comes my way.
