

Capstone Project Manuscript Guidelines

- ✓ Remove this page once manuscript is finalized.
- ✓ Next page is a full cover page (image).
- ✓ Use the appropriate styling in your manuscript. Available document styles are as follows:
 - Capstone Content – Body Text
 - Capstone Content – Main Heading
 - Capstone Content – Section Heading
 - Capstone Content – Section Sub Heading 1
 - Capstone Content – Section Sub Heading 2
 - Capstone Content – Section Sub Heading 3
- ✓ Insert appropriate Table and Figure Labels using References > Insert Caption > Label Type
- ✓ Update Table of Contents, List of Tables and List of Figures
- ✓ Update all Table and Figure numbering as needed.
- ✓ All explainer section (in RED FONT) should be removed.

**SK 360°: A CENTRALIZED DIGITAL PLATFORM FOR ACCOMPLISHMENT
REPORTING, BUDGET TRACKING, AND YOUTH GOVERNANCE IN LIPA
CITY**

A Capstone Project

Submitted to the Faculty of

NU Lipa - School of Architecture Computing and Engineering

In Partial Fulfillment of the Requirements for the Degree

Bachelor of Science in Information Technology with

Specialization in Mobile and Web Application

CHAPTER 1

INTRODUCTION

The Sangguniang Kabataan (SK) serves as the primary youth governance body in the Philippines, mandated to lead youth participation, strengthen civic engagement, and promote accountability in local communities as stated in the SK Reform Act of 2015 [1]. Youth governance plays an important role in democratic development because institutions like the SK help build young leaders, promote public participation, and support long-term community involvement. National agencies such as the Department of the Interior and Local Government (DILG) emphasize that effective SK operations rely on organized documentation, coordinated reporting structures, and consistent monitoring of youth programs across barangays [2]. With this, having clear, transparent, and systematic processes becomes essential to good governance.

Within cities and municipalities, the SK Federation acts as the central coordinating body that connects all barangay SK councils. It is responsible for consolidating accomplishment reports, monitoring youth activities, issuing announcements, and guiding SK leaders in the implementation of community-based programs. However, many of these workflows are still done manually, relying on paper-based documentation, unstandardized digital submissions, and communication through informal channels such as group chats [3], [4]. These fragmented practices cause late submissions, inconsistent file formats, data loss, and difficulty maintaining organized and auditable records, especially when compiling monthly, quarterly, and annual accomplishment reports that require uniformity and proper tracking.

These challenges are more evident in Lipa City, which has seventy-two barangays with different administrative capacities and digital practices. The Federation often experiences delays, incomplete submissions, inconsistent report formats, and difficulty consolidating documents across barangays. Per existing policy, financial validation remains the sole responsibility of the barangay SK Chairman prior to submission; the Federation and the proposed system perform no auditing function. This means the Federation's role is limited to receiving, recording, consolidating, and archiving reports without performing financial verification to follow existing administrative procedures. Leadership transitions every three years also create challenges because newly elected SK officials must gain access to previous reports and records. Without a centralized repository, documents become

scattered, lost, or inaccessible, making it harder for new councils to continue existing programs.

Studies on digital governance show that local government units can improve efficiency, coordination, and transparency by adopting ICT tools that support existing workflows [5], [6]. While some LGUs already use digital platforms, most are not designed specifically for SK governance and often lack youth-focused features such as standardized accomplishment report formats, organized leadership profiles, centralized communication, and support for leadership transitions [7], [8]. This reveals a technological gap in digital tools made specifically for youth-governance processes in the Philippines.

To address these challenges, this study proposes the development of a SK 360°: A Centralized Digital Platform for Accomplishment Reporting, Budget Tracking, and Youth Governance in Lipa City. The system integrates essential SK functions such as accomplishment report submission, standardized monthly, quarterly, and annual report compilation, SK budget document uploads, leadership profile management, announcements, meeting schedules, and an event calendar accessible to all SK accounts. Role-based access will be implemented for the SK Federation President, System Admin, SK Chairman, and SK Secretary to ensure secure and appropriate system usage. A real-time chat feature will also help improve communication between the Federation and barangays. In addition, the portal supports leadership transitions by preserving historical records, uploaded reports, and leadership information for newly elected SK officials. By unifying these components in one platform, the system aims to support organized, transparent, and efficient youth governance aligned with national guidelines and the operational needs of the SK Federation of Lipa City.

Overall, this study contributes to the modernization of youth governance through a digital system built specifically for SK workflows. While other LGU platforms focus on general administrative needs, this system is designed for youth-governance requirements such as report standardization, inter-barangay coordination, communication, and leadership transition support.

1.1 PROJECT CONTEXT

The SK Federation of Lipa City oversees the activities, reports, and coordination of the seventy-two barangay SK councils in the city, as mandated by the SK Reform Act of 2015

[1]. Despite this important responsibility, the current workflow is still manual and scattered. Councils submit physical documents, use inconsistent digital formats, and rely on group chats for communication, which often causes delays, incomplete submissions, duplicated files, and difficulty organizing citywide records [3], [4]. The different digital capacities of barangays make coordination even harder for the Federation.

The proposed system aims to centralize essential SK functions, including accomplishment report submission and compilation, budget document uploads, announcement posting, meeting scheduling, leadership profile management, and real-time messaging. A role-based access structure will be created for the SK Federation President, System Admin, SK Chairman, and SK Secretary to ensure organized and secure system usage. It also includes an event calendar that all SK accounts can view for better scheduling and coordination.

The system follows the existing workflow where the financial validation of budget reports is handled only by the SK Chairman at the barangay level. The portal does not verify budget accuracy but simply provides an organized place to upload, store, and archive these documents. The platform also preserves historical data to support leadership transitions, ensuring newly elected SK officials can access previous submissions and records. This addresses the common concern raised by the Commission on Audit (COA) and DILG about the loss of records and weak documentation during turnover.

This project supports Sustainable Development Goal (SDG) 16, which promotes transparent and accountable institutions, and SDG 17, which highlights strengthened coordination and partnerships [9], [10]. By offering a digital platform designed specifically for SK operations, the study fills an important gap in youth governance systems. Existing LGU tools are not built for SK reporting and coordination, making this project valuable for improving documentation, communication, and continuity in the SK Federation of Lipa City.

1.2 OBJECTIVES OF THE STUDY

General Objective

The general objective of this study is to design and develop SK 360°: A Centralized Digital Platform for Accomplishment Reporting, Budget Tracking, and Youth Governance in Lipa

City that streamlines accomplishment reporting, budget documentation uploads, announcements, communication, and SK profile management, while ensuring that the system is user-friendly, functional, reliable, secure, and efficient for both the SK Federation and the barangay SK councils.

Specific Objectives

Specifically, this study aims to:

1. To design an intuitive and user-friendly interface that allows SK officials especially SK Chairman and Secretary to submit accomplishment reports, upload documents, access updates, and navigate system features smoothly.
2. To develop a standardized module for the submission and automated compilation of monthly, quarterly, and annual accomplishment reports for all barangay SK councils.
3. To implement a secure role-based access control system for the SK Federation President, System Admin, SK Chairman, and SK Secretary to ensure proper authorization and workflow management.
4. To establish a centralized announcement, integrated event calendar, and real-time chat feature that improve coordination between the Federation and all barangay SK councils.
5. To evaluate the developed system using ISO/IEC 25010 software quality attributes functionality, usability, reliability, performance efficiency, and security to ensure that it meets the required standards for SK governance.

1.3 SCOPE AND DELIMITATION

Scope of the Project

This study focuses on the design and development of SK 360°: A Centralized Digital Platform for Accomplishment Reporting, Budget Tracking, and Youth Governance in Lipa City. This study covers the development of modules for accomplishment report submission and automated compilation, SK budget documentation uploads, announcements, meeting

schedules, real-time chat, leadership profile management, and an integrated event calendar visible to all SK councils. The system includes role-based access control for the SK Federation President, System Admin, SK Chairman, and SK Secretary. Only the SK Chairman and SK Secretary are allowed to submit reports and upload official documents on behalf of their barangay SK council. The system also supports leadership transition by preserving historical data, past submissions, and SK council profiles to ensure continuity for newly elected officers. The system is developed solely for the SK Federation of Lipa City and is limited to the features defined in this study, focusing only on the functions required within the academic research timeframe.

Delimitation of the Project

This study is limited to the development of a web and mobile application designed specifically for the SK Federation of Lipa City. Although the system includes core modules such as accomplishment report submission, automated monthly, quarterly, and annual report compilation, budget documentation uploads, announcements, meeting schedules, leadership profile management, an integrated event calendar, and real-time chat, it does not cover more advanced functionalities such as automated budget auditing, performance analytics, project evaluation tools, or integrations with external LGU and COA databases. Financial verification of budget reports is also not part of the system, as this responsibility remains with the barangay SK Chairman before submission.

The following has been excluded from this study: expansion of the system for use by other municipalities or LGU departments, inter-city SK coordination, scalability for nationwide deployment, online payment gateways, SMS broadcasting systems, AI-driven analytics, offline mode, automated election modules, and extensive customization options. The development is limited only to registered SK officials within Lipa City and will operate within the academic research timeframe. The system serves purely as an internal digital platform for coordination, documentation, and record-keeping and does not replace mandatory hard-copy submissions required by DILG or COA thus ensuring compliance with regulatory requirements.

CHAPTER 2

REVIEW OF RELATED LITERATURE, STUDIES AND SYSTEMS

2.1 RELATED LITERATURES/STUDIES

In this section of your manuscript, you should provide a comprehensive review of the existing literature pertaining to a specific topic or research question. A review of related literature should not be merely a listing of descriptions. It should be organized by some criterion, such as chronologically or thematically (Note: Properly cite the source of your information as needed.).

The aim of a literature review is to show the reader what the researchers have read, and have a good grasp of, the main published work concerning a particular topic or question in a particular field. This work may be in any format, including online resources. It may be a separate assignment, or one of the introductory sections of a report, dissertation, or thesis. In the latter cases in particular, the review will be guided by the research objective or by the issue or thesis arguments and will provide the framework for further work. It is very important to note that the review should not be simply a description of what others have published in the form of a set of summaries, but should take the form of a critical discussion, showing insight and an awareness of differing arguments, theories, and approaches. It should be a synthesis and analysis of the relevant published work, always linked to your own purpose and rationale. Published as well as unpublished research studies are sources of materials which may be included. The research studies may also be identified as foreign or local. It is commonly accepted in the undergraduate theses and capstone project that both foreign and local studies must contain at least five related studies. In the graduate studies, each must contain fifteen to twenty.

Related Studies are the previous studies relevant to the present research. This part is an examination and discussion of the previous and present research and projects undertaken that gives the researchers/proponents a better idea and had motivated them in pursuing the specific field of study. It is more than an annotated bibliography or a summary because you are organizing and presenting your sources in terms of their overall relationship to your study. This section shows evidence that you have enough knowledge of the proposal based on the research/project conducted by previous researchers.

- *At least 5 related literature and 5 related studies*

2.2 RELATED SYSTEMS

In this section of your manuscript, you should compare various features of related existing systems to your proposed project (web and mobile) system. Provide the description of the related system application being compared (Note: Properly cite the source of your information as needed.).

Table 1 Gap Analysis Table of Related Systems and Applications

Feature(s)	System Name	System Name	System Name	System Name
Country				
Application Type				
Feature 1				
Feature 2				
Feature ...				

Discuss in this section each system(s) with description of the system or application and its features.

2.3 SYNTHESIS

In this section of your manuscript, you should provide a comprehensive discussion about the gathered information from multiple sources or research studies on a specific topic to develop research findings and insights. Include here the justification of the Present Study/Project (known as Synthesis)

- ✓ *The researcher should be able to convince his reader that his thesis or capstone project is not a duplication of other's work.*
- ✓ *In case that the proposed capstone project is a continuation of a previous work, it should give emphasis or justification why the proposed thesis or capstone project, is needed.*
- ✓ *There may be also a need to continue with the present investigation to affirm or negate the findings of other inquiries about the same research problem or topic.*

CHAPTER 3

TECHNICAL BACKGROUND

This chapter presents the detailed technologies to be used in the development of the proposed system. Also, a through discussion on the technical description of the proposed system and its components are described.

3.1 DETAILS OF THE TECHNOLOGY TO BE USED

In this section sufficient discussion of various software, hardware, network, and people requirements must be included. If there are special hardware (e.g., biometrics, server, etc.), and special software systems (e.g., OS) that are essential in the actual project development should also be described.

Software/Hardware Requirements

In this section, overview of the current technologies (software and hardware) used should be listed and discussed.

- *For MWA, list down software according to the following classifications (IDE, Programming Language, Database, and Third-party Libraries).*
- *For MAA, list down software according to the following classifications (Multimedia Tools, IDE, Programming Language, Database, and Third-party Libraries).*

Table 2 Software Requirements for Systems Development

Software Classification	Software Name
Integrated Development Environment (IDE)	
Programming Languages and Frameworks	
Database	
Third-Party Libraries	
Others	

Each software applications used to develop the proposed system must be briefly described based on its purpose, features, and version.

Table 3 Hardware Requirements for Systems Development

Hardware Component	Technical Specifications

Each hardware component used in the development of the proposed project must be briefly described.

Network Requirements

Discuss the network requirements used in the development of the proposed project.

Peopleware Requirements

List down all the required people that will be involved in the development of the proposed project. Be able to discuss their roles and responsibilities in the development phase.

Table 4 Project Team Members, Roles and Contact Details

Name(s)	Role	Contact Details
CAPSTONE PROJECT TEAM		
CLIENT/PARTNER ORGANIZATION TEAM REPRESENTATIVES		

3.2 PROJECT TECHNICAL DESCRIPTION

For technical background, the following should be followed:

- ✓ *Discussions should be elaborated as much as possible in layman's term. However, it should not be too detailed that you end up repeating or lifting practically the discussion from different sources.*
- ✓ *It should not be too shallow or vague that the discussion becomes useless.*

- ✓ *It should contain enough detail to help the readers appreciate its application in the capstone project.*
- ✓ *It must be written in narrative form. It is important that the section starts with a paragraph that describes what the readers should expect on it. Subheadings are recommended for discussions that are substantially long.*

For system development, usually, the system architecture with different modules is presented in the chapter. The technologies that are planned to include in the application (specifically, in the modules) are also mentioned.

For short films, movies, and the like; the technical aspect of designing, production, and techniques applied to your assets should be mentioned.

Special Features of the System

This section may include sufficient discussion of the integrated existing software products. If there are special hardware (e.g., biometrics, server, etc., and software systems (e.g., OS) that are essential in the actual project should also be described.

System Architecture

In this section, illustrate and discuss the technical aspect of the capstone project development using System Architecture System Architecture (MWA or MAA) diagram, the technologies, or components (third-party systems integration), and the modules (features or functionalities).

Figure 1 Overall System Architecture

Web Application Modules

In this section, describe each component (modules) presented in the system architecture diagram and discuss thoroughly its purpose, functions, and features.

Mobile Application Modules

In this section, describe each component (modules) presented in the system architecture diagram and discuss thoroughly its purpose, functions, and features.

CHAPTER 4

METHODOLOGY, SYSTEM PROCESSES AND DESIGNS

This chapter presents the methodology, requirement analysis and documentation, the design of the system using different models and the development of the proposed system application.

4.1 REQUIREMENTS ANALYSIS AND DOCUMENTATION

This section of your capstone manuscript contains the employed methods to address the project proposal which comprises the following sub-sections:

Research Methodology Used

Discuss thoroughly the research methodology pursued by the proponents. A research methodology describes the techniques and procedures used to identify and analyze information regarding a specific research topic. It is a process by which researchers design their study so that they can achieve their objectives using the selected research instruments. It includes all the important aspects of research, including research design, data collection methods, data analysis methods, and the overall framework within which the research is conducted. There are three types of research methodology—quantitative, qualitative, and mixed-method, which can be chosen based on the research objectives.

Project Development Methodology

Select the appropriate project development methodology that fits on your proposed project such as Agile, Waterfall, etc. Include here your own illustration of the project development methodology framework used (MWA – Agile, Waterfall; MAA – Multimedia Cycle).

Figure 2 Project Development Methodology

Discuss the various stages in the project development methodology vis-à-vis on tasks/requirements of your proposed project. Also, in this section include a table that list the detailed activities on various phase/stages of the project development framework and the required deliverables.

Table 5 Project Development Phases, Activities and Deliverables

Phases	Activities	Deliverables

Functional Requirements

In this section of your manuscript, be able to provide a table that presents the list of system modules (MWA – both web and mobile system; MAA – either web, desktop or mobile system) based on required functionalities (user-defined, proponent-defined, and/or panelist-defined functions). Moreover, detailed functional requirement should be included in the Appendix section of your manuscript.

Table 6 Functional Requirements of the Project

Functional Requirement ID	Function Name(s)	Description

Non-Functional Requirements

In this section of your manuscript, be able to provide a table that presents the list of non-functional requirements (MWA – both web and mobile system; MAA – either web, desktop or mobile system) which are a set of specifications that describe the system's operation capabilities and constraints such as the following: Functionality, Performance, Scalability, Portability, Compatibility, Reliability, Availability, Maintainability, Security, and Usability.

Table 7 Non-Functional Requirements of the Project

Non-Functional Criteria	Description
	The system should: 1. 2. The system is constrained to: 1. 2.

4.2 DESIGN OF SOFTWARE, SYSTEMS, PRODUCTS AND/OR PROCESSES

Use Case Diagram

Figure 3 Use Case Diagram

Present and discuss in this paragraph the Use Case Diagram of the System (MWA – both web and mobile system; MAA – either web, desktop or mobile system) (Use Style: Capstone Content – Body Text). Note: Diagrams symbols, flows and labels must be readable.

Use Case Narratives

Present in this section the Use Case Narratives based on various Use Case (MWA – both web and mobile system; MAA – either web, desktop or mobile system) illustrated in the Use Case Diagram. Narratives should be consistent.

Functional Decomposition Diagrams

Figure 4 Functional Decomposition Diagram of the Web Application

*Present and discuss in this paragraph the Functional Decomposition Diagram of the system (MWA – both web and mobile system; MAA – either web or mobile system, if applicable otherwise MAA required designs) (Use Style: Capstone Content – Body Text).
Note: Diagrams symbols, flows and labels must be readable.*

Figure 5 Functional Decomposition Diagram for Mobile Application

*Present and discuss in this paragraph the Functional Decomposition Diagram of the system (MWA – both web and mobile system; MAA – either web or mobile system, if applicable otherwise MAA required designs) (Use Style: Capstone Content – Body Text).
Note: Diagrams symbols, flows and labels must be readable.*

Process Flow Diagrams

Figure 6 Process Flow – Module A

Present in this section all the process flow of the system (users vis-à-vis system modules) using Activity Diagram with Swim Lanes (MWA – both web and mobile system; MAA – either web or mobile system, if applicable otherwise MAA required designs). Describe each illustration explaining the various processes involved in the specific module (Use Style: Capstone Content – Body Text). Note: Diagrams symbols, flows and labels must be readable.

Figure 7 Process Flow – Module N

Present in this section all the process flow of the system (users vis-à-vis system modules) using Activity Diagram with Swim Lanes (MWA – both web and mobile system; MAA – either web or mobile system, if applicable otherwise MAA required designs). Describe each illustration explaining the various processes involved in the specific module (Use Style: Capstone Content – Body Text). Note: Diagrams symbols, flows and labels must be readable.

4.3 DESCRIPTION OF THE SYSTEM

In this section of your capstone manuscript, you should include illustration of all major screen designs (MWA – both Web and Mobile Systems; MAA – Storyboard for Film or Animation; MAA System Development – either Web or Mobile Systems) and should contain a brief description of its functions and features. All other screen design or layout should be in the Appendix (Screen Layouts) section of the manuscript with proper label.

Figure 8 Web Application System – Module A

Describe each individual screen designs (module) by explaining the main functions and features. Repeat for other major screen designs (Use Style: Capstone Content – Body Text).

Figure 9 Web Application System – Module N

Describe each individual screen designs (module) by explaining the main functions and features. Repeat for other major screen designs (Use Style: Capstone Content – Body Text).

REFERENCES

In this section, use appropriate referencing tools such as Mendeley or Zotero. Use IEEE refencing styles accordingly (refer to this link <https://iee-dataport.org/sites/default/files/analysis/27/IEEE%20Citation%20Guidelines.pdf> as a guide).

APPENDICES

APPENDIX A.

LETTERS AND

DOCUMENTATIONS

In this section of your Appendix, scanned clear copy and/or actual document must be included. Note: Documents that should have signatory fields must be completely signed (wet mark is a MUST). Document should be available are as follow(s):

- *[Form] Capstone Team Assignment*
- *[Forms] Request Letter for Client Interview with Non-Disclosure Agreement*
- *[Forms] Request Letter for Capstone Adviser (Letter and Advising Contract)*
